2.2.2	<i>Setting Up Workstation and Launching Edusmart Science.....</i>	3
3	UNINSTALL INSTRUCTIONS	3

1 System Requirements

- Windows 98/98SE/2000, XP, Vista , or Windows 7
- Pentium IV 2.8 GHz (or equivalent)
- 512 MB RAM
- 4 GB free hard disk space
- CD/DVD-ROM
- Windows compatible sound card

2 Installation Instructions

2.1 DVD Version

- Insert Edusmart Science DVD (installation disc) into the DVD-ROM drive. The setup program should start automatically.

OR

If it does not, go to Run... in the Windows Start Menu and type
d:\Setup.exe
(Substitute your DVD-ROM drive if not d:)

- Follow the on-screen instructions as they guide you through the installation process.
- Upon completion of the installation, you will be prompted to click 'Finish.' On clicking 'Finish' the program will launch automatically. The program creates a desktop icon for 'Texas - Grade X' that can be double-clicked for future launches.

2.2 Networked Workstation Installation

Instead of installing Edusmart Science on each computer in a classroom, you may wish to install it to a network file server. This method makes the installation much quicker and maintenance is easier.

A file server is a computer running a server-based operating system (e.g., Windows Server) or it may be a computer in a peer-to-peer network designated as the server, and this computer is set up with a file-share.

2.2.1 Installation on a File Server

- Set up a directory/drive on your file server with access permissions. If this is a peer-to-peer network, then set up a file-share on the computer.
- Follow the normal DVD installation process. When asked to select the install location, select the directory/drive in the file server that was set up in the previous step.
- Allow the installation to complete.

2.2.2 Setting Up Workstation and Launching Edusmart Science

Each workstation must now be set up to use the file server's copy of the installation.

- Map the drive on each workstation to the network file-share previously created on the file server.
- To run Edusmart content on the workstation, run Start.exe program on the mapped network drive.
 - e.g., f:\Start.exe

Note: You must run this program through the mapped drive and not by using the UNC file path (\\servername\folder\Start.exe).

3 Uninstall Instructions

The Edusmart Science product incorporates an Uninstall Program which will remove the product from the computer automatically. If your subscription expires or you no longer wish to use the program, find and choose 'Uninstall Texas - Grade X' from your list of programs. Simply clicking on the 'Uninstall Texas - Grade X' icon, and then clicking on the 'YES' button when prompted will uninstall the program completely from the computer.
